

## TECHNOLOGICAL CONTAINER / SOLID

### A proven structure for extreme conditions

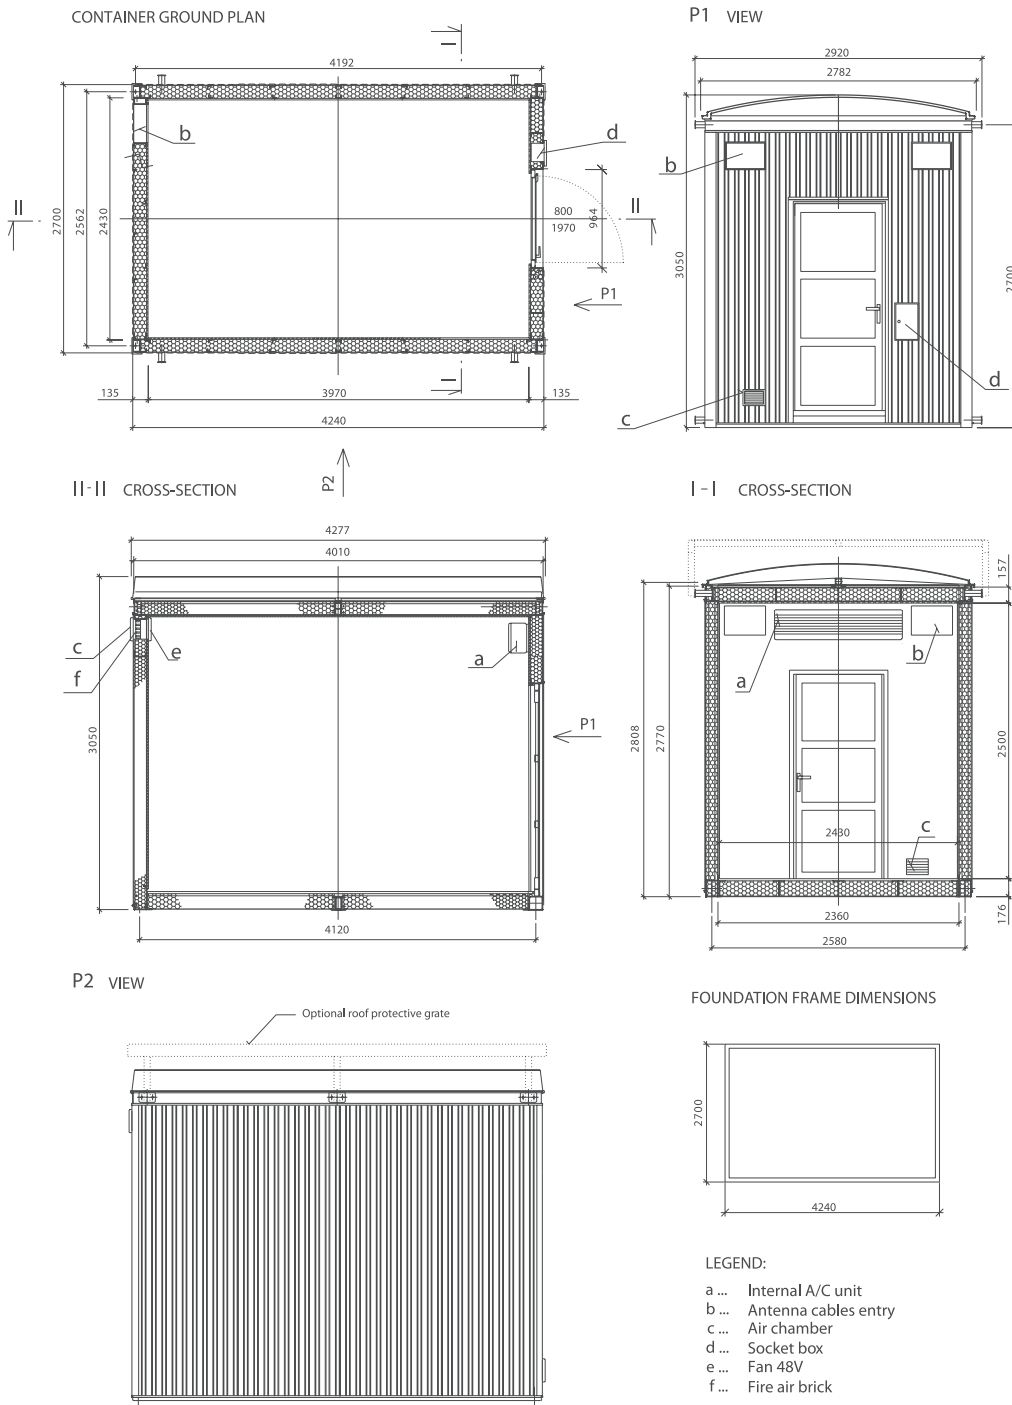

The "SOLID" container of the standard series has been designed for extra exposed locations. This well proven massive structure with its increased protection against violent intrusion meets even the most exacting requirements of specific customers. Due to its heavy weight the container is recommended for ground installation on a pre-constructed concrete foundation or concrete or steel footings.

For the container installation on building roofs where the static of the structure does not allow for heavy loads we have developed a suitable and economical version that can be assembled on the very spot. The installation on a prepared frame with a modern design goes well with the surrounding architecture. Placing the container by means of a crane takes about 3 hours.

**Attached to the container can be up to 4 pieces of piping or lattice masts up to 9 m high.**

## TECHNOLOGICAL CONTAINER SOLID – 2,5x4 m

Due to continuous innovations TERMS a.s. reserves the right to make changes without any prior notification.

DIMENSIONS OF CONTAINERS	2,5x3m	2,5x4m	2,5x6m
<b>OUTSIDE DIMENSIONS (mm)</b>			
Housing length	3240	4240	6240
Housing width	2700	2700	2700
Housing height	2770	2770	2770
Ridge height	3050	3050	3050
Roof width	2780	2780	2780
Maximum length (ridge length)	3280	4280	6280
Maximum width (over the pintles)	2920	2920	2920
<b>WEIGHT (kg)</b>	<b>3096</b>	<b>3609</b>	<b>4841</b>
